DETAILED ACTION

This Action is in reply to communication filed on 10/13/2008.

Response to Amendment

1. In the claims, Applicant amended claims 1, 6, 7, 8, 10, 11, 13, 19, 20, 21, 25 and 27.. Claims 1-27 are all the claims currently pending in the present application, and represent an method/system for "ACCESSING FUNCTIONALITIES IN HYPERMEDIA".

Response to Arguments

2. Applicant's arguments, see "Applicant Arguments/Remarks Made in an Amendment", filed 10/13/2008, with respect to the rejections of claims 1-27 under D'Souza et al (D'Souza), U.S. Patent No. 6,745,224 B1 in view of Hoag, U.S. Patent No 6,114,978 have been fully considered and are somewhat persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, analyzing claim's scope, and identifying allowable subject matter, a new ground of rejection is made below.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 7, 11, 19, 20, 21, 26, and 27 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s)

Art Unit: 2443

contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims contain the phrase "collating data corresponding to the element..." which is not clearly described in the specification. The specification in the SUMMARY OF THE INVENTION section, par. 0007 briefly mentions the term without further details which could provide an average skill in the art to interpret its meaning in the context of the invention.

5. Appropriate correction is required. The above mentioned problem is simply exemplary. Applicants are required to completely review the application for errors and correct the same.
